

7 hidden time leaks

**that can hold back your
insurance agency growth**

Find the servicing friction.
Make room for revenue work.
Plan your next growth move.

GUIDE + WORKLOAD AUDIT + HANDOFF + GROWTH PLAN

Make more room for the work that grows your agency

For agency owners and operations managers with an active book and recurring servicing work.

Growth needs time.

Give that time a purpose.

When servicing fills the day, quote follow-up, client reviews and referral conversations can get pushed back. Find one source of friction, then decide which growth activity deserves the time you may release.

01 Observe a typical week

Choose one recurring workflow. Measure the handling time and waiting. Name the sales or client conversation that keeps getting postponed.

02 Fix the handoff

Define the inputs, owner, completion standard and review points. Start with a task you can explain and check.

03 Give capacity a growth job

Choose a follow-up or client-review block, name its owner and track actual results. Pages 12 and 13 turn capacity into a testable growth plan.

Use examples, not policyholder files

The examples in this guide are illustrative. Use task counts and anonymous descriptions. Follow your agency procedures, carrier requirements, permissions and applicable licensing boundaries. This guide does not decide which activities any individual is authorised to perform.

Requests everywhere

A request enters by email. A second arrives in a call. A third is mentioned to a colleague. Without a shared record, a team can spend time finding the work before doing it.

LOOK FOR THIS

For one week, note where servicing requests arrive and where the next action is recorded. Look for items that exist only in someone's inbox or memory.

MAKE ONE CHANGE

Agree on one approved place to track the request, owner, due date and status. Keep sensitive information within approved agency systems. A tracker should point to the authorised record rather than create unnecessary copies.

ILLUSTRATIVE AGENCY EXAMPLE

A request for a policy document arrives by email. The agency records it in its approved workflow with one owner and a next-action date. The team can now see whether it is awaiting information, review or completion.

THE GROWTH CONNECTION

Finding requests faster can leave more room for timely quote follow-up. Check whether follow-ups actually happen sooner.

YOUR NEXT QUESTION

How many minutes did we spend locating or clarifying work this week?

The missing-information loop

Work starts before all the information is available. Someone follows up, switches tasks, returns later, and discovers another missing item.

LOOK FOR THIS

Pick five recent requests from one workflow. Which missing inputs caused work to stop? Count the extra contacts and the time spent restarting.

MAKE ONE CHANGE

Write a short intake checklist. Separate required inputs from optional details. Confirm that the checklist reflects the agency's current process. Give incomplete requests a clear status and next action.

ILLUSTRATIVE AGENCY EXAMPLE

For renewal preparation, the agency defines the information needed before a file is ready for review. A support person checks for completeness and flags gaps; the appropriate agency professional handles coverage decisions.

THE GROWTH CONNECTION

A complete file can help your authorised team begin renewal conversations earlier. Track review readiness and completed conversations.

YOUR NEXT QUESTION

Which three missing inputs most often prevent this task from moving forward?

The same details, again

The same information is copied between an inbox, an agency management system and a separate list. Every extra entry creates effort and another place to check for discrepancies.

LOOK FOR THIS

Map where information is first recorded and every place it is copied. Ask which copy is necessary, which is optional and which has become habit.

MAKE ONE CHANGE

Identify the approved source of truth. Remove unnecessary duplication only after confirming that reporting, recordkeeping and downstream users will still have what they need. Test one change before applying it widely.

ILLUSTRATIVE AGENCY EXAMPLE

A team keeps a second list of every request even though the same status already exists in its approved system. It reviews whether that list serves a real purpose before changing the process.

THE GROWTH CONNECTION

Reducing duplicate entry may create room for prospect follow-up. Assign the time before another admin task absorbs it.

YOUR NEXT QUESTION

Where do we enter the same information more than once, and why?

Preparation interrupts judgement

Experienced team members move repeatedly between routine preparation and decisions requiring their judgement. The task may need both, but the same person may not need to perform every step.

LOOK FOR THIS

Break one workflow into preparation, decision, approval and completion steps. Record who is responsible and what permissions each step requires.

MAKE ONE CHANGE

Create a written boundary between gathering or organising information and making decisions. Define exactly when a support person must stop and escalate. Have the agency approve that boundary before work changes hands.

ILLUSTRATIVE AGENCY EXAMPLE

A support person assembles the required renewal documents and lists missing information. The authorised agency team reviews the file and makes the relevant decisions. Readiness and approval remain distinct.

THE GROWTH CONNECTION

Separating preparation can protect licensed team time for advice, quote discussions and suitable account reviews.

YOUR NEXT QUESTION

Which preparation step could be separated without transferring decision authority?

Pending without an owner

A task is marked pending, but nobody knows who should move it next. Other team members check the same item or assume someone else is following up.

LOOK FOR THIS

Review a sample of pending work. Can a colleague identify the current owner, the reason it is waiting and the next action without asking around?

MAKE ONE CHANGE

For every pending item, record an owner, waiting reason and next-action date. Define an escalation route for items that remain blocked. Review exceptions rather than chasing every task indiscriminately.

ILLUSTRATIVE AGENCY EXAMPLE

A document request is waiting on a third party. The tracker names the follow-up owner and next-action date, while urgent exceptions go to the designated agency contact.

THE GROWTH CONNECTION

Clear follow-up ownership can support client responsiveness. Track outstanding items alongside renewal outcomes.

YOUR NEXT QUESTION

How many pending items have no clear owner or next-action date?

Done means different things

One person considers a task complete when the document is prepared. Another expects review, filing and a status update. That difference creates avoidable rework.

LOOK FOR THIS

Choose a recently returned task. What was missing? Was the expected output clear at the start? Separate unclear instructions from execution errors.

MAKE ONE CHANGE

Write a completion checklist with the required output, naming convention, filing location, review requirement and status update. Include an example with sensitive information removed.

ILLUSTRATIVE AGENCY EXAMPLE

The handoff says: prepare the requested material, route it for agency review, file the approved version in the authorised location and update the task status. Required approval is not skipped.

THE GROWTH CONNECTION

Less rework may leave more room for client conversations. Keep quality checks so faster work does not create new problems.

YOUR NEXT QUESTION

What must be true before the next person can rely on this task being complete?

The process lives in someone's head

Instructions are repeated on calls or in messages. New team members ask the same questions, and changes to the process do not reach everyone consistently.

LOOK FOR THIS

List the questions that came up twice this month. Find one recurring task whose instructions are incomplete or scattered across messages.

MAKE ONE CHANGE

Document a single procedure using the template in this kit. Name its owner, version and review date. Start with a small scope, watch the first handoff and update the instructions from what you learn.

ILLUSTRATIVE AGENCY EXAMPLE

The agency documents one preparation workflow, reviews a sample output and updates the procedure. Everyone uses the same current version rather than an old message thread.

THE GROWTH CONNECTION

A documented handoff can help your team support a growing book. Track service quality and workload as volume changes.

YOUR NEXT QUESTION

Which recurring question would disappear if one clear procedure existed?

What does one task cost in time?

Use a representative week and the same task definition throughout. Separate time spent working from elapsed time waiting.

Recurring task

Tasks per week

Average active minutes per task

Current weekly workload hours

Retained review / oversight hours

WORKLOAD = VOLUME x MINUTES / 60

Illustration only: 40 tasks x 12 minutes / 60 = 8 hours of current weekly workload. This is not a claim that all 8 hours can be removed or that Pegasus will save this amount.

One-time setup / training effort

Next step: simplify, document, reassign or seek support

Estimate potential net capacity separately

Potential transferred hours minus retained review, coordination and rework = estimated net capacity. Track actual results after a change. Time released is not automatically cash saved or revenue earned.

Your first handoff brief

Write the brief, review it with the responsible agency person, then test it on a limited scope. Do not include policyholder data in this worksheet.

Task + trigger

Required inputs + approved system

Steps + definition of complete

Task owner

Reviewer / approval owner

Stop and escalate when...

Procedure owner + version + review date

More time needs a revenue purpose.

A clearer workflow is the first step. Growth depends on what your agency does with the capacity, the opportunities available and how well your team serves them. Choose one activity to test.

01 Follow up on existing quotes

Protect a block for your authorised team to contact prospects with outstanding quotes. Record follow-ups completed, conversations, bound policies and agency revenue actually earned.

02 Make room for client reviews

Use prepared files to support timely renewal and needs-review conversations. Your authorised team decides what is suitable. Record reviews completed and retention or additional business separately.

03 Build referral relationships

Give a named person time to maintain referral relationships and respond to introductions. Track qualified introductions and resulting business, rather than treating every contact as a sale.

Capacity supports growth; it does not create demand by itself.

If you lack qualified opportunities, address that too. Keep service quality, client suitability and agency review in place as you test the change.

Your capacity-to-growth plan

Start with observed workload on page 10. Use your own figures, label estimates and review what actually happens. Do not put policyholder details here.

Net hours available per week, after review and rework

One growth activity + named owner + calendar block

Current baseline + activity target + review date

MODEL AN OPPORTUNITY, NOT A PROMISE

For quote follow-up: available hours x realistic follow-ups per hour = activity capacity. Then use your own observed follow-up-to-bound rate and average agency revenue per bound policy to model a scenario. Use the same cohort and revenue period throughout.

Your assumptions / source / revenue period

Actual activity / bound business / agency revenue / support cost

Premium is not agency revenue. Revenue is not profit. Deduct support and incremental costs to assess contribution; avoid double-counting renewals and new business. If rates are unknown, measure activity first.

Make room for growth. Start with one workflow.

Bring the servicing task that crowds out quote follow-up or client conversations. Use your workload estimate and growth plan to decide where a process change or additional support could make room for revenue work.

Free 30-minute Insurance Agency Growth Capacity Review

Bring one workflow to Chris. Examine the bottleneck, keep the right decisions with your agency and choose a growth activity for any capacity released.

What you will leave with

- One servicing bottleneck linked to a postponed growth activity.
- A first handoff outline with ownership and review points.
- An activity target and a way to check actual revenue outcomes.

Pegasus provides remote insurance operations support. If the review identifies a fit, Chris can explain the relevant service scope and pricing. The review is free, and there is no obligation to purchase.
